Legend

Oeko-Tex Standard 100 is an international testing and certification system for textiles, avoiding or limiting the use of harmful substances in production.

Ecospecifier is an eco-products knowledgebase providing information to assist the design of eco-preferable buildings, interiors and landscapes in Australia.

The EU Flower is the symbol of the European Eco-label – a symbol of greener products.

Fabric Collection | Finishes Collection | **Care & Maintenance Standards**

Care & Maintenance Standards

Care & Maintenance Standards

In order to preserve the integrity and longevity of our products, Haworth has established certain care and maintenance standards for our fabrics and finishes. Two important reminders: when using any cleaning agent, we recommend that a small, inconspicuous area be pre-tested for colorfastness before cleaning the stain. And in the case of overall soil condition or a large-scale stain, you should contact a professional furniture cleaning service for cleaning recommendations.

General Recommendation for Environmental Cleaning Procedures to Reduce Interior Environmental Impacts

- Minimize the amount of cleaning chemicals used since excess chemicals result in rapid re-soiling. Use of Green Seal Certified Cleaning Products. Green Seal is awarded to product that work well and have less impact on the environment.
- For general maintenance cleaning, consider using vacuums with high efficiency particulate air (HEPA) filtration to trap airborne particles and keep them from affecting the indoor air quality.
- Use no or low VOC cleaning products. Consider detergent based products compared to those containing solvents, where possible.
- Consider extraction processes where appropriate to remove excess chemicals and water and to maximize cleaning results. Extraction can also help reduce chemical levels in the indoor environment. Spot extraction may also reduce the chances for over-wetting of fabrics and resulting water stains.
- Choose cleaning products with no or low levels of dyes or fragrance. Dyes and fragrance do not generally improve cleaning results and can cause allergic reactions in people with sensitivities to chemicals. Some dyes could cause staining on fabrics.
- Consider choosing biodegradable cleaning products.
- Environmentally preferable ingredients for cleaners include surfactants containing terms such as lauryl, amides and glycosides.
- Not recommended are products containing ammonia and alcohols.

Polyester or Olefin Fabrics

- These fabrics are colorfast when using standard wet and dry processes and are also resistant to most spot-cleaning solvents.
- Oil or grease spots will respond to mild solvent or dry cleaning agents. A blotting technique should be sufficient to remove most spots.
- Accumulated dirt and grime spots can be removed with a mild detergent or upholstery shampoo. Rinse well with a clean sponge to remove traces of the water-based cleaning agent, but do not soak the substrate, if possible. Fabric will dry very quickly.
- Avoid excessive brushing or rubbing to prevent pilling of the fabric surface.

Wool Content Fabric

- Dry (solvent) cleaning methods are preferred; water-based products may cause shrinkage.
- Oil, grease, and general dirt spots should respond to a mild, dry cleaning solvent. Use a blotting technique. Rubbing the fabric may lead to surface abrasion.
- Should an unacceptable degree of surface distortion – such as pilling – result from spot-cleaning, you may realign the fabric fibers using a standard handheld steam iron. Use the ‘wool’ setting, with steam, to press the affected fibers back into place.

Nylon Fabric

- These fabrics are colorfast when using standard wet and dry cleaning processes and are also resistant to most spot-cleaning solvents.
- Dry soils: vacuum surfaces regularly to prevent sand, dust, ash, and dry dirt from being worked into the fabrics.
- Wet soils: use commercially available water-based upholstery detergents to clean mud, spills, food, and so on. Follow directions on package.
- Oily spills: grease, tar, greasy foods, and the like may require cleaning with a solvent cleaner or solvent-fortified detergent. Follow directions on package.
- A blotting technique should remove most spots. Avoid brushing or rubbing to prevent pilling of the fabric surface.

Seating Vinyl

- Use a gentle mixture of any mild soap and warm water to clean common surface soils. Using a soft cloth, wash the area, rinse, and dry with a soft cloth.
- For dirt that is imbedded in the grain of the vinyl, use a soft brush, and if necessary, a touch of cleaning powder. Rinse and dry with a soft cloth.

Leather

- For general maintenance, wipe the leather surface with a dry and soft lint free cloth.
- Vacuum clean the leather regularly with a soft brush.
- For AP leather(AP-), most stains can be removed with lukewarm water and a mild soap. Then wipe the leather with a damp cloth and dry with a soft, dry cloth.
- It is not recommended to clean Nature leather (XE-) with water because of the use of water-based finishes and a damp cloth may cause colour staining during cleaning.
- Saddle soaps, polish, or wax should never be used.
- Leathers with a specialty finish or a ‘sueded’ finish should be professionally cleaned.

Laminate

- For general cleaning, use mild detergent and warm water. If the surface becomes stained, use a non-abrasive cleaner. After washing, rinse with warm water and dry with a soft cloth.
- For Haworth proprietary laminates, use Glass Plus spray cleaner for general cleaning. For heavier cleaning of fingerprints or food oils, use soap and water with a soft bristle brush, rubbing in a light circular motion.

Wood Furniture

To maintain our finely crafted wood furniture, you should pay special attention to the wood surface and finish. Careful maintenance is necessary to protect your investment.

Special Precautions

- All finishes are designed to protect wood surfaces against most common spills of inks, perfumes, nail polishes, nail polish removers, and beverages if removed immediately with a damp cloth.
- To protect the wood surface, protective desk pads must be placed under all writing areas and business machines.
- Extreme heat and humidity can be harmful to wood furniture. Do not place products in direct sunlight, near radiators or air conditioning vents, humidifiers, fireplaces, etc. Always use coasters under hot objects, such as coffee pots and cups.

Regular Maintenance

- Regular dusting will help avoid build-up of dirt and grime that can dull the finish. Use a damp cloth and follow the grain of the wood. Water should not be used in excess amounts when cleaning, nor should it ever be allowed to stand on wood surfaces.

Wood Trim and Skins

Regular Maintenance

Regular dusting will help avoid build-up of dirt and grime that can dull the finish. Use a damp cloth, following the grain of the wood, and wipe dry.

Avoid using any cleaners containing any form of abrasives or corrosive agents.

For more through cleaning, use a mild detergent and wipe dry with a lint free cloth.

Painted Steel Furniture

Files, cabinets, and pedestals require minimum maintenance. Clean all surfaces with lukewarm water and a mild soap as needed. After washing, rinse with water, and dry with a soft cloth. Slide mechanisms need no lubrication. All mechanisms have been prelubricated at the factory to last for the life of the product.

Painted Steel Trim

Painted metal/steel trim requires minimum maintenance. Clean with lukewarm water and a mild detergent as needed. After washing, rinse with clean water on a soft cloth, and dry with a clean soft cloth.

Systems Glazed Panels

Straight glazed panels have a ¼” tempered clear and bronze-tint safety glass or frosted acrylic. Use any good glass cleaner and a soft cloth to clean the glass.

Markerboard

When a markerboard needs to be cleaned because of erasing (ghosting) problems, we suggest that you use Haworth recommended mark pen and cleaner. The surface should then be wiped with soap and water and a clean cloth.
